

Presentation Title: UAT for Web-Based Systems: Talking to the (fire)Wall

Presenter: Steven Barry, Data Kinetics Ltd.

Presentation Abstract:

The biggest problem facing UAT for web-based systems is dealing with a large, and largely anonymous, user base. This presentation focuses on the shifting issues surrounding defining, knowing, understanding and communicating with web system users and client systems. Attendees will get an understanding of how to define their web users as well as techniques and tools to carry out effective communication with them.

Brief Bio:

Steven Barry teaches "The Essentials of Software Testing" for Data Kinetics Ltd. He has an expert knowledge of the subject matter, coupled with a natural ability for teaching. He practices, teaches and does presentations on a variety of topics dealing with software testing, "The Essentials of Web Testing" and "The Essentials of User Acceptance Testing".

Mr. Barry has also developed, tested and deployed many CBT (Computer-Based Training) programs and web sites. He currently directs the Education Department at Data Kinetics
